-110.93700

Notes

From e-mail: "[In Truman Gulch]... We found a soft 4 finger layer about a foot thick over 6 to 12 inches of large grained facets that wouldn't let us isolate a column. As we skinned up, we experienced whoomping and cracking in the snow sometimes when the second skier crossed the pockets other times the first guy was heavy enough by himself. Nothing propagated into larger slabs..."
