Activity

Skiing

At 6450 feet on a north facing aspect on Little Mt. Ellis I found a snow depth of 75 cm. I dug a pit and got a Ct - 7. Ect - 18, both failing on ground facets at 15-20 cm depth. I didn't see any slides, but I did feel and hear one whumpf on the way up. Needless to say, I kept it low angle on the way down. Hope you can use this data. Thanks for all the great work you do!

Region

Northern Gallatin

Location (from list)

Mt Ellis
