Natural slides occurred on Peak 10,024 in Shower Creek basin

Date Sun, 02/28/2021 - 13:10 Activity Skiing

Observed two dry-loose slides and one slab avalanche on the NE-facing slope of Peak 10,024 (not sure if it has a local name) in the Shower Creek basin on Sunday - all were presumably naturally triggered. We didn't observe them slide. The slab avalanche may have been from the previous day?

Region Northern Gallatin Location (from list) Hyalite - main fork Observer Name Naturals in Shower Creek basin
