

Saddle Peak, Bridger Range

Date

Thu, 11/11/2021 - 08:41

Activity

Skiing

Fitness skinning around Bridger Bowl yesterday and noticed a fairly large, new avalanche on the east face of the North peak of Saddle. Maybe 100 feet below the ridge, about 100 wide at the crown, ran thru the rock bands but not over the cliff. Was taken back by the clean propagation.

Region

Bridger Range

Location (from list)

Saddle Peak

Observer Name

Albert
