

Ross Peak, East shoulder

Date

Sun, 12/12/2021 - 09:00

Activity

Skiing

Not much to share but skinned to ~7600' to open meadow on E aspect of Ross Peak. Found 20-30cm snowpack. Majority of this was wind affected with many small pockets of cohesive slab (4-12cm thick) that was reactive. Turned around and skinned out before gathering more useful information, but thought I'd pass along!

Region

Bridger Range

Location (from list)

Ross Peak

Observer Name

Tim Benson
