

Meridian

Date

Sat, 01/22/2022 - 12:50

Activity

Skiing

Dug a pit on the southwest face of meridian before attempting to ascend a couloir. The pit was 70cm deep, recorded ECTP6 at 20cm on the interface between the new and old snow. Then had an ECTP19 at 50cm on facets on the ground. We decided to not ski this aspect. Dug another pit on the way up meridian on a west facing slope and had no results, snow was 170cm deep.

Region

Cooke City

Location (from list)

Meridian Peak
