Decent test on Beehive

Date Sat, 02/05/2022 - 12:00 Activity Skiing

Southeast face of Beehive Peak, just below (and to the side) of the exit from 4th of July Couloir -

ECTN, noticed layers approx. 30 and 45 cm down, but couldn't get anything to propagate.

pit depth approx. 200 cm deep (see buried probes)

felt good about the objective - climbed and skied 4th of July. Glad we did.

Region Northern Madison Location (from list) Beehive Peak Observer Name Tom Kochevar
