

Right side up snow pack on Mt Ellis

Date

Thu, 12/01/2022 - 11:35

Activity

Skiing

Pretty solid conditions yesterday. Some drifting occurring at the top but better than expected. Pit showed a right side up pack with the usual small layer of facets at ground level. ICT 25, slight but stable wind packed layer on top 2 in. Decent felt really good and conditions felt comfortable enough to ski any aspect on Ellis.

Region

Northern Gallatin

Location (from list)

Mt Ellis
