Remotely Triggered Avalanche Below Hyalite Peak

Hyalite Peak Northern Gallatin 1/21/2024 Code SS-ASr-R1-D2-O Aspect E Latitude 45.38710 Longitude -110.96100 Notes

An avalanche was triggered by skiers crossing a slope 400' below the crown.

From obs: "My partner and I remotely triggered a persistent <u>slide</u> on an East facing slope at 9350ft. The <u>slide</u> ran off the Evil Twin ridge, just below the large main summer trail bowl of Hyalite Peak. My partner and I were spaced out ~50ft when we both felt and heard a large whumpf. We looked up and saw the avalanche <u>slide</u>, but were both out of harms way from the path. The <u>starting zone</u> was ~400ft above us and the <u>slide</u> ran ~500ft in total length. The crown was just over 2ft deep at its max and 150ft+ wide. The were signs of recent <u>wind loading</u> as we approached the bowl prior to the <u>slide</u>."
