Activity

Skiing

ETCP 7. Broke on top of the facet layer mid pack. Only change that was noticeable from last week is the warming from the bottom up of the snow pack making nerd candy sized facets on the base of the pack. Domino surface hoar between facet layers not as present. 28degree slope. Fracturing present on roll over below into middle. Pit was dug down the ridge from the cornice release slide east side of prayer flags from last weekend.

1/20/2024 ETCP7. Facets were smaller and surface hoar layer domino layer between the bottom 8in facet layer and next 8in facet layer present. Pit dug east side prayer flag up the ridge from cornice release into middle.

Region

Northern Madison

Location (from list)

Middle Basin
