

NE aspect avalanche on Henderson

Date

Thu, 03/07/2024 - 16:40

Activity

Snowmobiling

From email: "This avalanche was triggered by a rider in our group on the 7th. The rider was midway up the slope, it broke above him right under the [cornice](#) and he successfully outrun the avy to the bottom. Right above the trail it looked the deepest at 10' to 12' deep at the peak and 6' plus further to the north."

Region

Cooke City

Location (from list)

Henderson Mountain
