

scary sized crowns in the Northern Bridgers 240308

Date

Fri, 03/08/2024 - 14:05

Activity

Snowboarding

We spotted several large crowns in the Northern Bridgers today. All appeared natural from the last few days. The snowpack has changed significantly since our last visit at the beginning of the week. A soft wind slab is now forming on top of the loose dry powder that fell recently. We did not have anything move on our runs but did have some collapsing on the skin track and boot pack.

Region

Bridger Range

Location (from list)

Frazier Basin

Observer Name

RK
