Unstable test result and collapse south of Cooke

Date Sat, 03/22/2025 - 18:55 Activity Skiing

Skied south of Cooke today. Got an ECTP28 down 80cm on small facets above a MF crust that was buried on March 14. West <u>aspect</u> at 9500'. While filling in the <u>snowpit</u> I got a large <u>collapse</u>. This is the same layer we were getting ECTP results on earlier this week north of town.

Region Cooke City Location (from list) COOKE CITY Observer Name Nina Marienthal
